

**IN-VEHICLE MULTI-CAMERA SOLUTION**

# Intelligent 360° Smart Camera Solution

Designed specifically for fleet operators, Teletrac Navman's smart camera solution is a high-definition system that captures rolling footage, while triggering events via internal sensors. Events that trigger are risky behaviours such as harsh driving or speeding. The combination of forward-facing, driver-facing, left and right-side cameras, gives you a 360° view of each vehicle.

Paired with an AI-based fleet management solution, the system is designed to connect, analyse and display the events most important to your business with all the information you need to see. Only see the footage that matters most via real-time event alerts, or download footage direct from the vehicle without leaving the office. Protect your drivers from fraudulent claims with an industry-leading multi-camera solution.

Protect your business against fraudulent insurance claims for peace of mind

Supports up to four high-definition 1080p cameras for high-quality footage

Analyses footage alongside telematics data to provide a complete view of incidents

Access footage as required or as events occur from the back-office

# How It Works

1

Sensors detect an anomaly and an event is raised in the system

---

2

High-definition video footage is automatically recorded

---

3

Footage & telematics data is communicated to the server

---

4

Information is analysed immediately by the fleet management system

---

5

Event view is created for the back-office to view footage and information

---

# Integrated video and telematics data to empower a safer and more efficient business

With an intelligent multi-camera solution that integrates into the smarts of a fleet management system, you gain visual and vehicle movement data, to help you understand events and make better decisions on the fly. Gain access to analytical information, that automatically combines the captured footage, direct to you via alerts, or request footage from the vehicle. With an integrated solution, you get a comprehensive visualisation of what happens on the road, rather than reading between the lines or piecing multiple data sources together.

## IMPROVE DRIVER BEHAVIOUR

Capture road events in real-time to increase fleet safety standards by identifying and correcting unsafe driving behaviour.

## SAFEGUARD FROM RISK

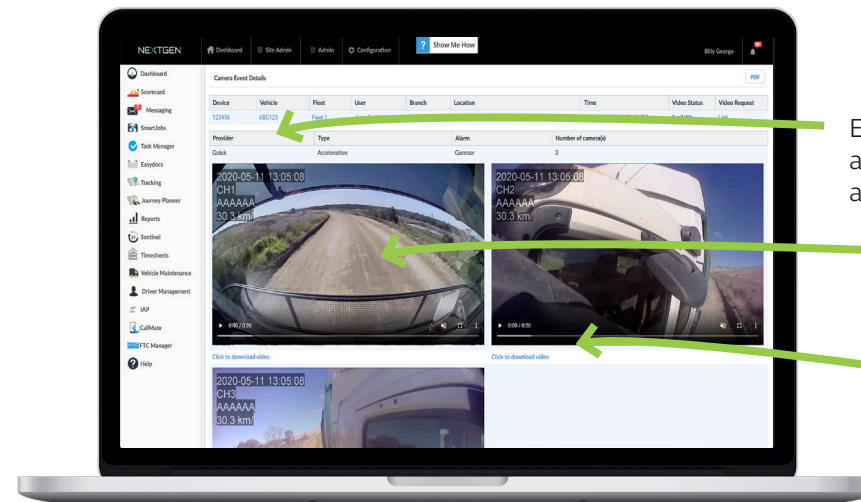

Protect drivers and the organisation from fraudulent accident claims with visual evidence of events.

## REDUCE FLEET OPERATION COSTS

By honing into operational insights provided by real-time footage, you can find areas of improvement to increase efficiency.

## GROW AND SUCCEED

Improve the fleet's reputation with safe drivers and low collision rates. Rest easy knowing your fleet is safe.

Event-based architecture means you get alerted as incidents occur on the road, with analytics and video footage in event format

Provides the ability to improve on driver on-road behaviours, all while you protect them from fraudulent accident claims

Adjustable warnings and alerts triggers that you can set up and edit based on your role in the business
